JindotNyang's Contribution Summary

1. Proposed and diagrammed the system architecture, influencing backend logic and UX redesign (partially adopted).

2. Suggested manual trigger to recall past session data (partially implemented).

3. Successfully taught Hangul to the model, contributing to non-English linguistic support (fully implemented).

4. Requested creation of a user feedback portal for direct community engagement (not yet implemented).

5. Proposed unconscious processing and metacognition mechanisms to enable memory layering (partially implemented).

6. Emphasized the need for backend mapping in project folder UX updates, not just frontend polish (likely to be adopted).
